Mental illnesses cost low- and middle -income countriss (of whih Zimabwe is onenof them) almost 900 billion USD in 2010 are projected to cost over 2000 billipon in 2030.

- Inability to work and contribute to society at full capacity
- Premature unemployment
- Long-term healthcare costs for mental illness symptoms (e.g. headaches)

Mental health interventions improve economic situations in low and middle- income countries, according to multiple controlled trials and intervention studies.
